

Mounting System TRIC flex one

Wagner Solar

TRIC flex one - Ground mount installation as easy as it can be!

The ideal mounting system for smaller greenfield mounting systems. Pre-assembled units with integrated steel roots provide flexible module pitches. Additional foundations and pile driving work are not required. Planning and installation times are significantly reduced.

TRIC

BENEFITS

- **Quick and easy planning and installation**
- **No additional foundation**
- **Flexibility: Variable pitch, modular extension**
- **Economic system costs**

DETAILS

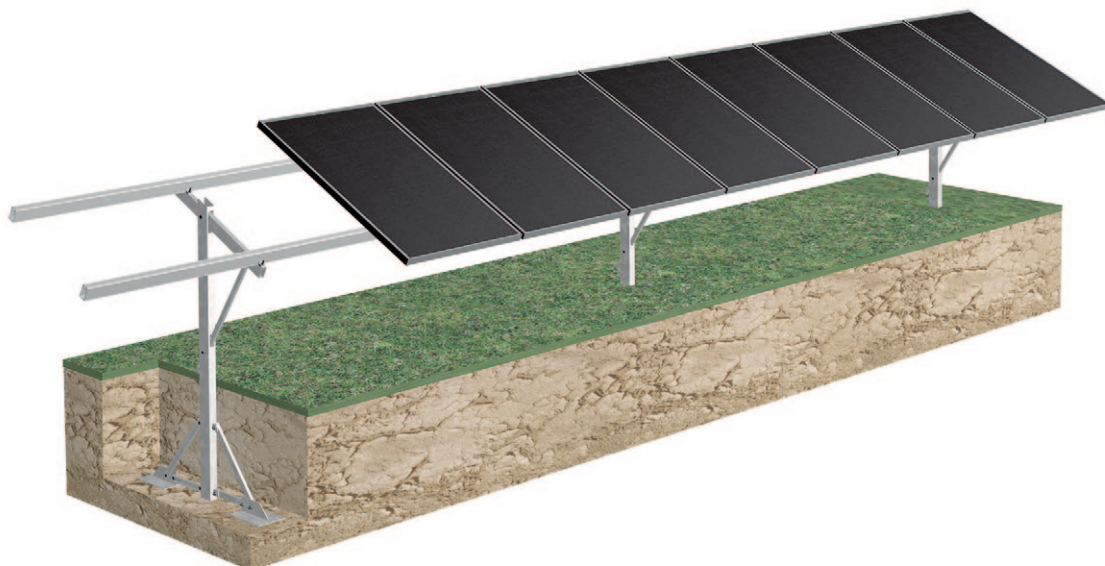

The folded post elements are delivered pre-assembled and only need to be unfolded and assembled on site. A soil survey is no longer required.

The post elements are simply placed in an excavated pit and aligned. The pit is then backfilled and compacted in layers. There is no need for concrete or pile-driving work.

The TRIC flex one pitch is adjustable in increments of 5° from 15° to 40°. System size can be varied by modular extension.

The overall system price is extremely attractive, as there is no need for time-consuming planning and extensive construction work.

Mounting System TRIC flex one

Technical Data	TRIC flex one
Scope Of Application	Small to mid size Systems
Configuration	1 panel row portrait, 15° to 40° pitch
Panel type	All framed PV Panels
Material	Galvanized steel and Aluminum, stainless steel bolts
Warranty	15 years
